1 Section 1

1.1 Notes

Notes:

- Either use this english version or the german version in `protokoll.tex`

- Replace all variables below *FOR STUDENTS* in this .tex file

- Replace the placeholders for your name and your student id (MatNr)

- Delete this hint and example chapters before the final submission

- Keep an eye on the required file formats and *file names*

- Execute `pdflatex` at least twice, in order to get correct references and page numbers in the pdf document

- You may also use the makefile for this purpose: `make en`

3 Demos

3.1 Source Code format

In these sections a few examples how to format source code in LaTeXare given.

You can include short code snippets or commands directly inline with `lstinline` block.

```c
/*
 * Just an example C-file.
 */

#include <stdio.h>

int global_variable = 1;
#ifdef DEBUG
int another_global_variable = 1;
#endif

/*
 * Some comment
 */
int main(void)
{
    temp_variable = 4711;
    another_variable = 0815;

    printf("foo bar baz %02d", temp_variable);

    return 1;
}
```

Listing 1: Example C/C++ file

```bash
#!/bin/bash
echo "Bash version ${BASH_VERSION}..."
for i in {0..10..2}
  do
      echo "Welcome $i times"
 done

echo "some very very very very very very very very very ⤸
    very very very very very very very very very very very ⤸
    long string"

exit 0;
```

3.2 Images

Here is an example how to insert an image into this document.
